

VOL.5 BRAILLE & TACTILE

FLOOR TILE

- HOMOGENEOUS BRAILLE TILE
- STAINLESS STEEL TACTILE

2021/22

HOMOGENEOUS TACTILE (BRAILLE TILE) *Sense of Touch*

The Ideal Guide Path with a combined aesthetic presentation and functionality. Designed for the sense of touch. It helps the blind and visually impaired navigate cities, tactile paving units are like braille for pavements. These raised bumps and ridges help guide people down sidewalks and across intersections.

Technical Specification
MS ISO 13006 : 2014
Sirim Certificate no : PC000082

•Length and width	+/- 1.0
•Thickness	+/- 10.0
•Straightness of sides	+/- 1.0
•Rectangularity	+/- 1.0
•Surface Curvature	+/- 1.0
•Surface Warpage	+/- 1.5
•Water Absorption	< 3%
•Chemical Resistance	Compiled
•Modulus of Rupture	>23N/sqmm
•Scratch Hardness, MOHs	>5

- Full body porcelain material.
- Our Tac tile are certified and used for Malaysia MRT and LRT project.

STAINLESS STEEL TACTILE Everlasting Tough

Stainless steel 'studs' or 'strips' are commonly used by the transportation authorities on rail transit stations or by building owners in commercial buildings/private buildings to provide guidance for movement.

Grade 316

Stainless steel is a metal alloy, made up of steel mixed with elements such as **chromium, nickel, molybdenum, silicon, aluminum, and carbon**. Iron mixed with carbon to produce steel is the main component of stainless steel. Chromium is added to make it resistant to rust. The main factor in the selection process for stainless steels is corrosion resistance. Careful consideration of the application should be done to enable a choice of grade to an economic minimum. Other considerations such as mechanical properties (strength and toughness). Lobby, LRT and MRT station, building walkway (interior)
